PROFESSIONAL SUMMARY

AI-Enhanced SDET and QA Automation Engineer with **5+ years of experience** designing and delivering scalable **BDD test automation frameworks** using **Selenium WebDriver, Java, TestNG, and Cucumber**. Proven track record of automating end-to-end test coverage for **CRM** and **Gaming** applications. Experienced in integrating **AI-driven workflows** (ChatGPT, Chrome DevTools Recorder) to accelerate test design, eliminate manual scripting effort, and optimize execution performance. Skilled in **Page Object Model (POM)**, session state injection, CI/CD pipeline integration, and **performance testing** with Gatling. Adept at Agile/Scrum environments with a strong understanding of **SDLC** and **STLC**.

TECHNICAL SKILLS

Test Automation: Selenium WebDriver, Playwright (Basics), TestNG, Cucumber BDD, Page Object Model (POM), Data-Driven Testing
Programming Languages: Java (Core), Basic JavaScript (for Playwright), XPath, CSS Selectors, Gherkin
Frameworks & Architecture: BDD Framework, Hybrid Framework, Maven Project Structure
Build & Development Tools: Maven, IntelliJ IDEA, Git, Chrome DevTools Recorder
AI & Automation Tooling: ChatGPT (AI-assisted QA), Antigravity IDE (AI Agent-based development)
Performance Testing: Gatling (Load & Stress Testing), Zabbix (System Monitoring)
Security Testing: Burp Suite (Manual Security Validation, API Testing)
Test Reporting: Extent Reports, HTML Reports
Defect & Task Management: ClickUp, JIRA
Testing Types: Functional Testing, Regression Testing, Smoke Testing, End-to-End Testing, UAT, Security Testing, API Testing
Methodologies: Agile, Scrum, SDLC, STLC
Domain Knowledge: CRM Platforms, Gaming Applications

WORK EXPERIENCE

QA Automation Engineer

Apr 2021 – Present

Digient Technologies Pvt Ltd

Chennai, India

- Designed and implemented a scalable **BDD automation framework** using **Java, Selenium WebDriver, TestNG, and Cucumber**, covering end-to-end workflows for CRM (Audience, Campaigns, Journeys) and Gaming UI modules.
- Automated **functional, regression, and smoke test suites**, improving release cycle confidence and reducing manual testing effort by over 60%.
- Pioneered a **4-step AI-driven automation approach**: framework setup via AI, workflow capture using **Chrome DevTools Recorder (JSON)**, AI-generated Gherkin scenarios and Step Definitions, and locator stabilization via DOM analysis.
- Implemented **session state injection** (localStorage tokens and cookies) to bypass repeated login flows, reducing total **test execution time by ~50%** while maintaining full test isolation.
- Replaced fragile XPath/CSS locators with stable, DOM-analyzed selectors; enforced proper **explicit waits and synchronization** strategies to eliminate flakiness.
- Leveraged **ChatGPT** and **Antigravity IDE** to accelerate step definition creation, test case design, and test data generation, cutting scripting effort significantly.
- Generated structured **Extent Reports** and integrated defect tracking workflows with **ClickUp** for streamlined defect lifecycle management.
- Collaborated closely with developers and product teams in an **Agile/Scrum** environment to review requirements, identify edge cases, and ensure test coverage alignment with acceptance criteria.
- Applied network-level testing using **Burp Suite** for manual security validation of Gaming APIs; explored **Playwright's route interception** for mocking API responses and simulating edge cases (e.g., insufficient balance, timeouts, empty datasets) in UI regression testing.
- Exploring **Playwright** for next-generation UI automation, focusing on auto-waiting, modern locator strategies, and parallel execution to improve test stability and performance.

KEY PROJECTS

AI-Enhanced CRM Test Automation Framework | *Java, Selenium, Cucumber BDD, TestNG, Maven* Digient Technologies

- Built a production-grade, scalable **BDD automation framework** following the **Page Object Model (POM)** design pattern for a multi-module CRM platform.
- Automated audience segmentation, campaign management, and customer journey workflows, achieving comprehensive **end-to-end test coverage**.
- Integrated **AI-assisted test scenario generation** using Chrome DevTools Recorder and ChatGPT to convert recorded user flows into Gherkin scenarios and Java step definitions.
- Improved **test execution stability** by replacing fragile locators with reliable selectors and applying synchronized wait strategies; reduced flaky tests by over 70%.
- Implemented **session injection mechanism** to inject browser session state (cookies, localStorage tokens) into new driver instances, cutting regression suite run time by **~50%**.

Performance & Load Testing Suite | *Gatling, Zabbix, Scala* Digient Technologies

- Developed **Gatling load and stress test scripts** to simulate concurrent user traffic against CRM and Gaming application APIs.
- Analyzed **response time, throughput, and error rate** metrics to identify performance bottlenecks under load.
- Correlated Gatling results with **Zabbix system metrics** (CPU, memory, network) to provide a holistic performance assessment for stakeholders.

EDUCATION

Bachelor of Engineering – Electronics & Communication Engineering (ECE)
S.K.P. Engineering College, Anna University

Apr 2021
Tamil Nadu, India

CERTIFICATIONS

Selenium with Java & Cucumber – Test Automation (BDD Framework)
Manual Testing + Agile Methodologies + JIRA – Software Quality Assurance
